	PnP/ //HSA		Disease Control and Prevention	ARRA Prevention and Wellness Fund - Communities Putting Prevention to Work (CPPW) - Component I	Awarded: 3U58DP001992-01S2 Component I (total award \$2.2m-split between PnP obesity prevention and MHSA tobacco prevention)	02/06/10	02/03/2012	Component I: to support obesity prevention through physical activity and nutrition by working with Texas Agri-Life Extension Service to establish joint use agreements between schools and local government agencies to share school locations with the general public after school hours as central community access points to provide safe places for physical activities and to serve as a central hub for community access to fresl local grown fruits and vegetables.	\$1,160,000
3 1	PnP	93.712/307 Centers for	Disease Control and Prevention	ARRA Immunization, ARRA Supplemental Funding for Reaching More Children and Adults, CDC-RFA-IP08-803	Awarded: 3H23IP622571-07S1	09/15/09	12/31/2011	To protect newborn infants against whooping cough by introducing cocooning, the immunization of immediate family members, in hospital, pediatric and OBG settings; increase the capacity of DSHS field offices to make influenza immunization available by replacing aging cold chain equipment, strengthening data management capacity, and engaging nursing professionals on a temporary basis during influenza season and H1N1 vaccine distribution; put surge capacity in place to meet potential H1N1-generated needs for a call center, in-state vaccine distribution and additional vaccine management capacity; apart from H1N1 issues, study school-based influenza immunization programs and identify best practices; determine the requirements necessary for providers with electronic medical records (EMRs) to more easily report electronically to ImmTrac, the state immunization registry; and develop strategies to improve immunization-readiness of first responders.	\$6,495,738
				Capacity - Rotavirus Vaccine Effectiveness	Awarded: 3U50CI623773-05S2	09/02/09	12/31/2011 ENDED	This project provides for active surveillance of acute gastroenteritis in young children who are admitted to Texas Children's Hospital or seen in the TCH emergency department during the rotavirus season, November through June. This includes primarily children in Harris County and from the surrounding counties (Fort Bend, Waller, Montgomery, Liberty, Chambers, Galveston, and Brazoria). Rota virus is the most common cause of diarrheal illness in children, with concomitant loss of school and work time for children and parents. Rotavirus infections are responsible for about 30-50% of hospitalizations for acute gastroenteritis in children under 5 years of age. A vaccine to prevent rotavirus illness is now available and recommended for young children. By also doing surveillance on vaccinations among these children and a group who have only acute respiratory illness, the surveillance project will yield important information about rotavirus vaccine effectiveness in community use. This information could help support immunization efforts in Texas.	
5	PnP	93.717/306 Centers for	Disease Control and Prevention	Epidemiology and Laboratory Capacity - Building and Sustaining State Prog to Prev HAI	Awarded: 3U50CI623773-05S1	08/28/09	12/31/2011	Funding will be used in building infrastructure for health care-associated infections surveillance and prevention: Activity A - development of a state health care-associated infections (HAI) prevention plan. A state plan must be developed and submitted to CDC by January 1, 2010. A multidisciplinary advisory group will be convened to provide guidance on the state HAI prevention plan. Activity B - HAI surveillance and reporting from medical facilities (hospitals and ambulatory surgical centers). Various applications and databases will be developed to enhance surveillance these include 1) a website for the general public to view and compare hospital HAI rates, 2) an database from managing HAI data and 3) a data validation application to assess the completeness and accuracy of data reported. Activity C - HAI prevention collaboratives. Prevention initiatives targeting catheter-associated bloodstream infections and surgical site infections will be developed with guidance from the Texas Hospital Association and the Texas Medical Foundation.
